The TX-YDSRN was established to understand depression and suicidality in Texas youth. 79.7% of participants had a primary diagnosis of depression. Just under half reported at least one suicide attempt.

Published Manuscripts

Published

7

This manuscript describes suicidality in the TX-YDSRN. Youth with suicidal ideation were more depressed and anxious, less resilient experienced more traumatic events, more likely to use recreational drugs, and participated in fewer social activities.
