New and Emerging Children's Mental Health Researchers (NECMHR) Initiative

New and Emerging Children's Mental Health Researchers

- This initiative focuses on advancing the knowledge and evidence base in the prevention and treatment of childhood mental illness and supporting the training and research of new and emerging researchers.
- NECMHR research must be related to improving the children/perinatal mental health system and/or children/perinatal mental health services in Texas. It also may include gaining an understanding of the causes of childhood psychiatric disorders.
- Basic bench research and pharmaceutical clinical trials are **NOT** eligible for NECMHR funding.
- Once promising and evidence-informed practices are identified, findings will be disseminated to inform providers, policy makers, advocates, and families about specific types of treatment approaches that can minimize the symptoms of childhood mental illness, promote recovery, and help all Texas children thrive.

Types of Grants

1. Research Career Development
2. Post-doctoral Fellow and Trainee
3. Research Project

Eligibility

- Only those affiliated with one of TCMHCC's participating health related institutions are eligible to apply.
- Principal investigators may partner with Texas-based investigators at non-TCMHCC institutions as needed.
- Prioritization will be given to applicants who have never been an NIH R-01 grant principal investigator and are at the rank of associate professor or below.
- Trainees including clinical and research fellows, are eligible and encouraged to apply.
- Proposals that include more than one TCMHCC institution are encouraged.

Research Priorities

This year we have incorporated research priorities and questions from the following agencies and groups:

- Texas Health and Human Services Commission
- Texas Department of State Health Services
- Texas Department of Family Protective Services
- Texas Juvenile Justice Department
- Texas Council of Community Centers
- Hogg Foundation
- Texas Child Mental Health Care Consortium (program medical directors and evaluation priorities)

Cross Institutional Mentorships

- Senior faculty at TCMHCC HRIs to provide mentorship to any applicant from any TCMHCC HRI.
- As part of mentorship, they would provide input to the researcher related to their proposals.
- If the researcher is awarded the grant and the mentor is identified as a mentor for their grant, they would assist the researcher and guide them along their research and publication of findings.
- They would have up to 5% salary support (using the 2024 NIH cap) if they were included on the applicant's proposal.
- Received mentorship interest from 10 senior faculty/clinicians.

Draft Timeline
